

Serial No. 10/005,195
Docket FUJ 0008 PA

A 1
the concrete 60, as discussed above. It is further noted that, as is illustrated in Figs. 3A and 3B, the sealing edges 30 define a sealing edge plane extending there between that extends along the plane of the panel forming surface 40. Accordingly, the rustications illustrated in Figs. 3A and 3B may be described as defining a gap between the lower surface 12 and the sealing edge plane. - -

In the Claims:

Please add the following new claim:

A 2
20. (New) An elongate body of extruded foam, said body defining an upper surface, a lower surface comprising a concave portion, and a pair of laterally-spaced sidewall surfaces extending between said upper and lower surfaces, wherein:

each of said laterally-spaced sidewall surfaces terminates at a downward-extending edge defined by said concave portion of said lower surface;
said respective downward-extending edges define a sealing edge plane; and
said respective downward-extending edges and said concave portion of said lower surface define a gap between said lower surface and said sealing edge plane.

REMARKS

Claim 20 has been added to further define the present invention, as illustrated in the original drawings.
